If this is a group project, which will be the responsibilities of each collaborator?

1.
2.
3...

**Rules and Acceptance:**

The primary purpose of the ICTP SciFabLab is to support scientific research, education and sustainable development by using modern computer-controlled tools available in the workshop structure. Other original guest projects are also welcome as long as they are meant to benefit a larger community and the designs and processes developed within the ICTP SciFabLab are made available for other individuals to use and learn from. Accepted projects should agree to follow these basic rules:

- to share their expertise with others members of the ICTP Scientific FabLab;
- to publish openly their results in the literature, on-line or exhibit in Maker events. The authors of any prototype, model or code will retain their full ownership; however it is highly recommended to release prototypes, models, and codes developed within the ICTP Scientific FabLab as open source / open hardware.

**By submitting this form the Responsible of the Project (also on behalf of all the other collaborators listed above) agrees that he/she:**

- **had read, understood and accepted all the above specified rules;**

- **raises the ICTP SciFabLab Administrators from any damage he/she or his/her collaborators may cause to persons or property inside or outside the ICTP Campus;**

- **agrees that the information provided by him/her on their Project can be made public;**

- **agrees that his/her personal information can be used by the ICTP SciFabLab and the ICTP Administration for the running of the premises;**

- **consents to share his/her contact and all information provided on their Project with ICTP SciFabLab for editorial and educational purposes.**
